## **Key EPA Registration Granted in USA**

### **Provides access to the largest air-conditioning and refrigeration market in the world**

In November 2005 Aeris Technologies advised that it expected its key Bioactive Coil Treatment product to receive Federal EPA regulatory approval in the USA in the first quarter of 2006.

The Company is therefore very pleased to confirm that it has received notification from the US Federal EPA that its core Bioactive Coil Treatment has gained approval. This registration, which gives the Company unique anti-microbial claims, is a major milestone for the Company and was completed in the timeframe advised. The Company is now able to achieve individual State registration, which are administrative only and granted quickly as a matter of course, and this is not expected to impact the roll-out of the products.

Importantly the registration now allows Aeris to promote its AerisGuard environmental hygiene system in the USA, the largest air-conditioning market in the world.

This EPA approval is also highly supportive of negotiations the Company is currently undertaking with a major multi-national organization in relation to a range of market opportunities in the USA and potentially other key global markets.

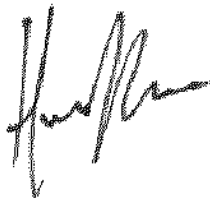

Whilst a normal commercial lead-time for sales applies the Company has been actively preparing for its launch into the USA and as part of this ramp up Aeris' Sales Manager and Technical Manager have just returned from the USA where they were planning promotional activities with major distribution partners at the NADCA Annual Conference, the peak body for the US air-conditioning industry.

The Company and its distribution partners are now in a position to bid for lucrative contracts in the USA and have already received very positive feedback from the market and expressions of interest from a number of large building owners. It is also important to note that this approval will now enable Aeris to gain early entry into the attractive food services and cold storage markets in the USA.

Biological contamination of air-conditioning and refrigeration systems affects human health, energy consumption and efficiency of processes across a range of industries. The Aeris Bioactive Coil Treatment is now in a unique position to satisfy the needs of these industries and gain momentum internationally based on the strong recognition of the value of the EPA approval.

Yours sincerely
